Business Requirements Document (BRD)

1. Project Background & Current State (AS-IS)

The organization currently manages customer complaints, issues, and inquiries through manual, decentralized tools—primarily spreadsheets, personal email inboxes, and phone logs.

- **Lack of Visibility:** Support leadership and team members have no single pane of glass into case statuses, queue depths, or overall turnaround times.
- **Manual Workflows:** Agents track incoming inquiries and follow-ups by hand, creating redundant efforts and uneven workload balancing.
- **Missing SLA Mechanisms:** Service Level Agreements (SLAs) are neither enforced nor tracked; there is no automated alert when customer issues become overdue.
- **Poor Customer Experience:** Customers must contact support multiple times to check issue progress due to lack of automated status communications.

2. Business Objectives & Future State (TO-BE)

The primary goal is to deploy Salesforce Service Cloud to standardize and automate case management across channels.

- **Centralize Case Intake:** Ingest issues from multiple inbound touchpoints into a unified repository.
- **Automated Assignment:** Eliminate manual sorting by routing incoming requests dynamically using business criteria.
- **Enforce Resolution SLAs:** Track key support milestones and enforce escalations to prevent breaches.
- **Data-Driven Operations:** Leverage real-time dashboards to measure agent efficiency, queue capacity, and customer health.

3. Project Scope

In Scope

- Multi-channel case intake via Email-to-Case and Web-to-Case.
- Case Assignment Rules based on case categorization (Type, Priority).
- Case Lifecycle Management (Status transitions, validation rules).
- SLA and Milestone tracking using Salesforce Entitlements.
- Case Escalation Rules for at-risk tickets.
- Support operations reports and executive dashboards.

Out of Scope

- Computer Telephony Integration (CTI) / Telephony dialer integrations.
- Artificial Intelligence/Chatbot support (Agentforce / Einstein Bots).
- ERP, billing systems, or third-party transactional system integrations.
- Self-service Knowledge Base automation (reserved for future release phases).

4. Stakeholders & Persona Matrix

Persona / Role	Primary Responsibilities	Core System Needs
----------------	--------------------------	-------------------

Property Manager	Oversees property operations, accounts, and complex inquiries.	Full visibility over assigned account records, escalation monitoring.
Maintenance Agent	Handles technical/mechanical case tickets and service work.	Rapid case updates, status transition tracking, validation alerts.
Finance Analyst	Manages rent, invoices, and structural/billing issues.	Dedicated queue access for structural/billing-related cases.
Support Executive / CEO	Executive oversight of customer support and performance metrics.	Aggregated real-time dashboards, SLA violation percentages.

Functional Requirements Document (FRD)

1. Functional Requirements Matrix

Req ID	Module	Requirement Description	Priority
FR-01	Data Model	System must track customer organizations as Accounts, contacts as Contacts, and issues as Cases.	High
FR-02	Intake	Inbound emails sent to support addresses must automatically create Case records and associated Tasks.	High
FR-03	Intake	Public web form must capture customer tickets and route them directly into Salesforce.	High
FR-04	Assignment	Inbound cases must be routed automatically to designated users/queues based on Type and Priority.	High
FR-05	SLA/Escalation	System must monitor SLA milestones via Entitlements and flag SLA Violations.	High

2. Ingestion Channel Specifications

Email-to-Case

- **Routing Address:** Dedicated support routing mailbox.
- **Defaults:** Status: `New`, Priority: `Medium`, Origin: `Email` (or `Web`/Configured routing default).
- **Settings:** Enable On-Demand Service, auto-create activity task (`Not Started`), save email headers, and associate thread context.

Web-to-Case

- **Intake Form Fields:** Contact Name, Email, Phone, Subject, Description, Priority, Status, Type, SLA Violation.
- **Redirection:** Post-submission redirection to corporate landing page.
- **Defaults:** Auto-assignment rule evaluation enabled; default auto-response notifications configured

Supplementary BA Artifacts

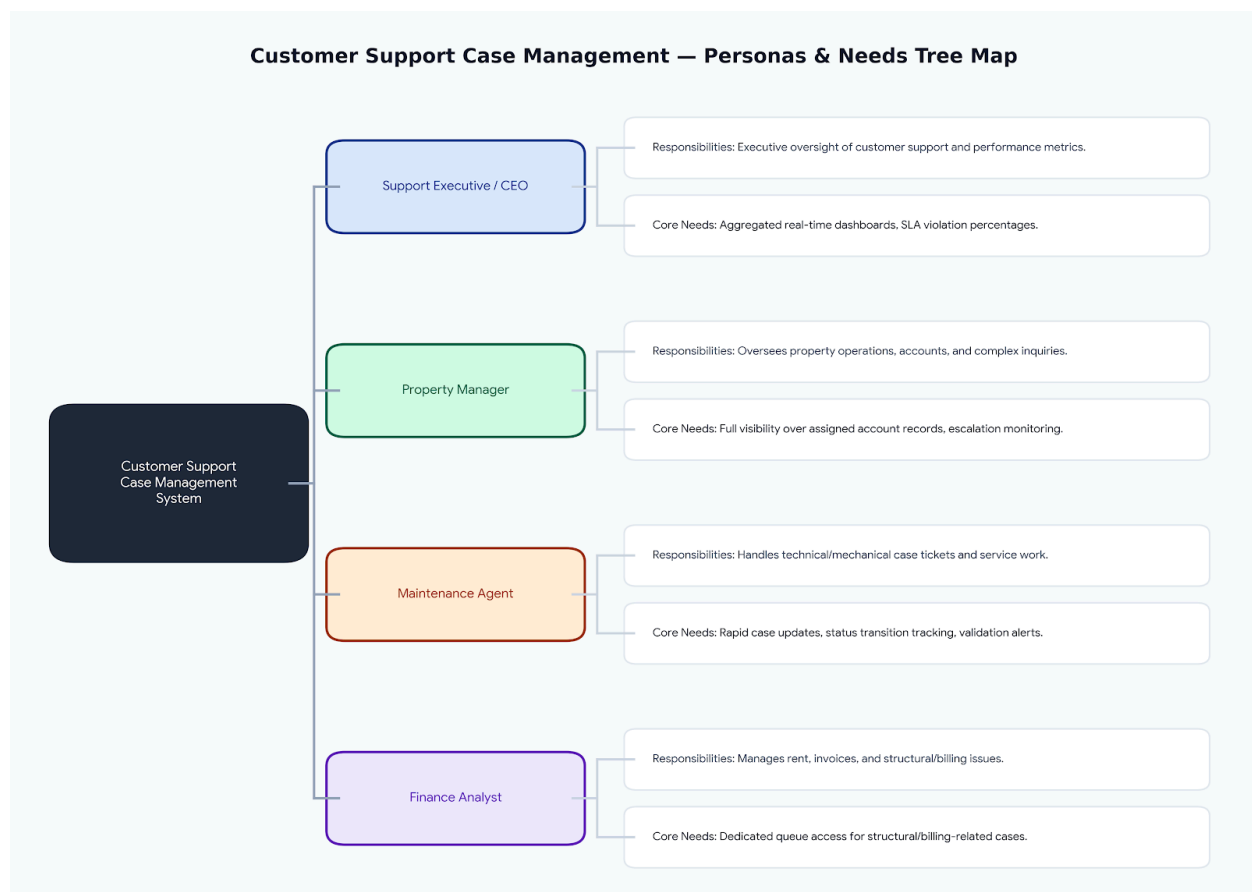

1. Logical Data Dictionary

Object	API Name	Description
Account	Account	Master organization record.
Contact	Contact	Represents customer individual; Mandatory on intake.

Case	Case	Tracks and manages customer issues, inquiries, and complaints end-to-end
Entitlement	Entitlement	Governs support level contracts.
CaseMilestone	CaseMilestone	Tracks SLA resolution/response countdowns.

2. Security & Access Architecture

- **Organization-Wide Defaults (OWD):** Cases set to **Public Read/Write** or **Private** based on organizational compliance (Private recommended with Role Hierarchy access grant).

- **Role Hierarchy:** Top-down hierarchy ensures the SEPL CEO inherits managerial reporting rollups across all child roles (Property Manager, Maintenance Agent, Finance Analyst).
- **Profiles:** Standard User profiles customized for access to Case, Account, and Contact objects without system-level administration rights.

3. User Acceptance Testing (UAT) Test Scripts

Test Case ID	Test Scenario	Execution Steps	Expected Result
TC-01: Web Intake	Validate Web-to-Case submission.	Fill Web-to-Case form (Status=New, Type=Mechanical) and submit.	Case record created in Salesforce with Origin = Web.
TC-02: Email Intake	Verify Email-to-Case creation.	Send email with subject and body to the designated routing address.	Case record created; activity task logged and associated to case.
TC-03: Assignment	Validate automated routing.	Create a case where Type = Mechanical.	Case Owner automatically defaults to Maintenance Agent user.
TC-04: Escalation	Validate High Priority handling.	Create a Case where Priority = High.	Milestone triggers escalation actions to Senior Queues.

System Implementation & UI Walkthrough

Inbound Case Creation via Email-to-Case with Automated Assignment

The screenshot displays the Salesforce interface for a Case record titled "Television not working". The page is viewed in "Developer Edition". The top navigation bar includes links to Service, Home, Chatter, Accounts, Contacts, Cases (selected), Entitlements, Reports, and Dashboards. The case details show a Priority of High, Status of New, and Case Number 00001031. The "Feed" tab is active, showing a "Post" section with a text input field and a "Share" button. Below the feed, there are tabs for "All Updates", "Emails", "Call Logs", "Text Posts", and "Status Changes". A recent update by "Lucky Sankhla" is shown, dated September 15, 2026 at 11:17 PM, with the note "Case updated" and "Case Owner (using assignment rule): Lucky Sankhla to Mechanical Team". The "Details" tab on the right shows fields for Case Owner (Mechanical Team), Case Number (00001031), Contact Name, Account Name, Type, Case Reason, Web Email, Web Name, Status (New), Priority (High), Contact Phone, Contact Email, Case Origin (Email), Web Company, and Web Phone. Each field has an edit icon.

Queues

Queues allow groups of users to manage a shared workload more effectively. A queue is a location where records can be routed to await processing by a group member. The records remain in the queue until a user accepts them for processing or they are transferred to another queue. You can specify the set of objects that are supported by each queue, as well as the set of users that are allowed to retrieve records from the queue.
